

e1\_readme\_sdsi\_v71-1 (.txt and .pdf) ... 15-Feb-2008 by mje

SDSI unForm e-Enabled Rule Files and Auxiliary Files  
( e-Enabled: enabled for unForm eArchive and eDeliver functionality )

File name: esdsi\_v71-1.zip

---

Place the zip file in the main unform server folder.

Extract into the main unform server folder, making sure that if you get or have a default folder prompt from your unzip utility, change the folder to be the main unform server folder itself, rather than a separate sub-folder.

\*\* Once downloaded, see the "e2\_readme\_sdsi\_v71-1.pdf" PDF document in the ehelpp/ folder for more information.

Contents of the zip file:

---

Folders:

eAddress	demo recipient address CSV files
edemotxt	demo text files used by demo scripts
ehelp	help resources folder
eLog	default eDelivery log folder

Rule Files:

esdsi_v71-1.rul	sample demo enhancement rule file
eArchive_sdsi_v71-1.rul	eArchive parallel rule file
eDeliver_sdsi_v71-1.rul	eDeliver parallel rule file
eDeliverEngine_sdsi_v71-1.rul	eDeliver Engine rule file, do not modify

Script Files:

esdsidemo.sh	unix demo script
esdsidemo.vbs	windows demo script

Demo procedures:

---

- Configure the smtp server= line in prog/mailcall.ini to point to your mail server, and/or make sure msfax or another fax server is set up
- optionally ... Edit eDel and eArc paths at top of esdsi\_v71-1.rul file; note that if the merge command rule file is set to "./" followed by the eDel\* or eArc\* file name, and enabled, no change should be needed
- optionally ... Edit paths in [X EDELIVER GLOBAL SETUP] rule-set of eDeliver rule file ... but NOT the eDeliverEngine rule file ... note that if the EDOC\_MERGE\_PATH global is set to "." and enabled no change should be needed
- optionally ... Edit paths in [X EARCHIVE GLOBAL SETUP] rule-set of eArchive rule file(s) ... note that if the EARC\_MERGE\_PATH global is set to "." and enabled no change should be needed
- check or edit paths in the esdsidemo shell or vbs script(s)
- For email, in the [X EDELIVER GLOBAL SETUP] rule-set, find the EDOC\_CCFORCE global constant, and place your internal testing email address there, be sure to save the file, and/or publish it from the unForm designer.
- Execute the shell scripts, logged in as root from the main unForm server folder ... these scripts launch client jobs on the edemotxt samples and email and fax and archive the sample documents
- Check for successful delivery; check for successful archive
- Check the eLog folder for a log file dated with the current date, and review the contents of the log file
